Yarra Valley Grammar Shelter & Walkway – Ringwood, Victoria

Commercial Systems Australia installed over 300m² of Ritek 200mm & 75mm Custom Curved Roof System to the Yarra Valley Grammar School in Ringwood, Victoria. As the Ritek system was new to us, we were given confidence by Ritek's comprehensive project management system, which included full documentation, shop drawings, engineering, certification & testing and long warranties.

When the Ritek roof panels were delivered to site they were packaged extremely well. Due to the safe and secure way that the panels were packed, there was not any damage to any roof panels during the whole project.

We were extremely pleased that all roof panels were delivered to site prior to their requirement date allowing Commercial Systems Australia to meet all completion dates without delay.

Ritek's superior roof system spanning capabilities enabled us to design and install a simple and cost effective structure that we were able to install very quickly and easily.

Our experience with Ritek was professional and the roof system worked well on this project. We would work with Ritek again.

Kind Regards,

Gavin Smith
